

std::exception

```
classDiagram
    class std_exception["std::exception"]
    class ComSquare_DebuggableError["ComSquare::DebuggableError"]
    std_exception <|-- ComSquare_DebuggableError
```

The diagram illustrates an inheritance relationship. At the top is a class box for 'std::exception', which is divided into three horizontal sections: the top section contains the class name, and the two bottom sections are empty. Below it is a class box for 'ComSquare::DebuggableError', also divided into three horizontal sections: the top section contains the class name, and the two bottom sections are shaded gray. A blue arrow with an open triangular head points from the top section of 'ComSquare::DebuggableError' to the bottom section of 'std::exception', indicating that 'ComSquare::DebuggableError' inherits from 'std::exception'.

ComSquare::DebuggableError
